

KRISPOL renovation solutions – *your offbeat garage with our advanced solutions*

KRISPOL's renovation solutions allow for the installation of sectional garage doors in challenging architectural conditions you may face in a new building and for the adaptation of existing buildings to the needs of homeowners. With KRISPOL renovation solutions, you choose durability and trouble-free installation of a sectional garage door.

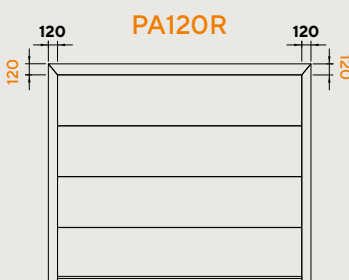

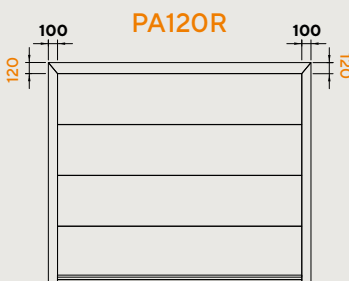

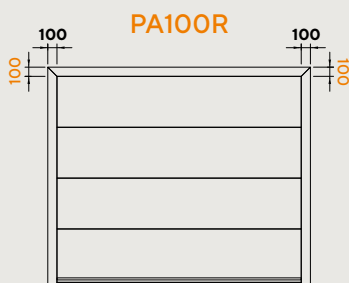

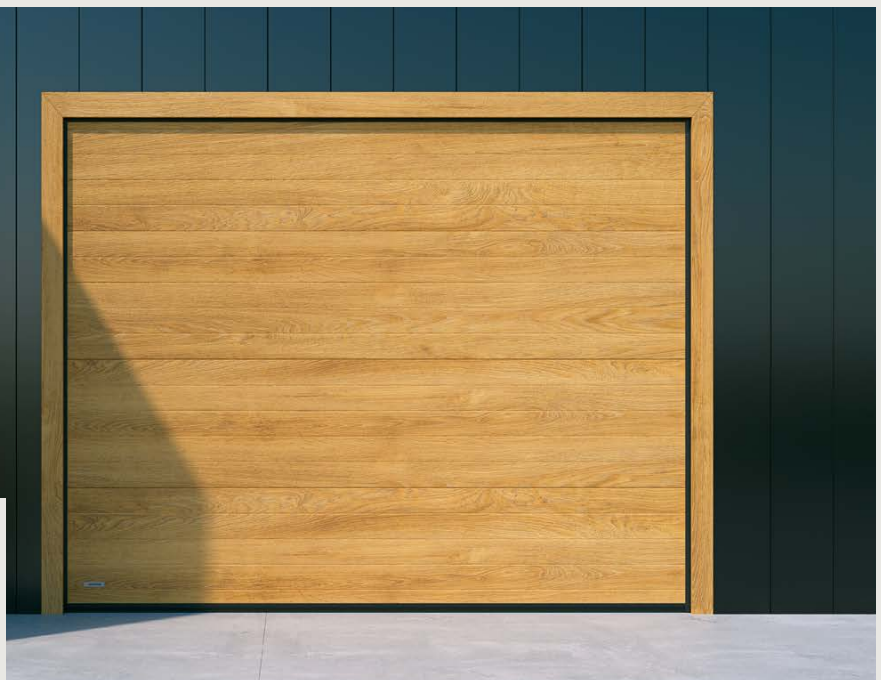

Discover new options with:

- › renovation frames,
- › vertical angel covers,
- › aluminium lintel strip.

Put your trust in KRISPOL's knowledge and experience.

KRISPOL renovation frames – *your garage, our know-how*

Replacing a sectional garage door in older buildings or in difficult conditions can be really challenging. Our PA100R and PA120R renovation frames are the ideal solution for quick and easy installation of sectional garage doors in the absence of side jambs and lintel space.

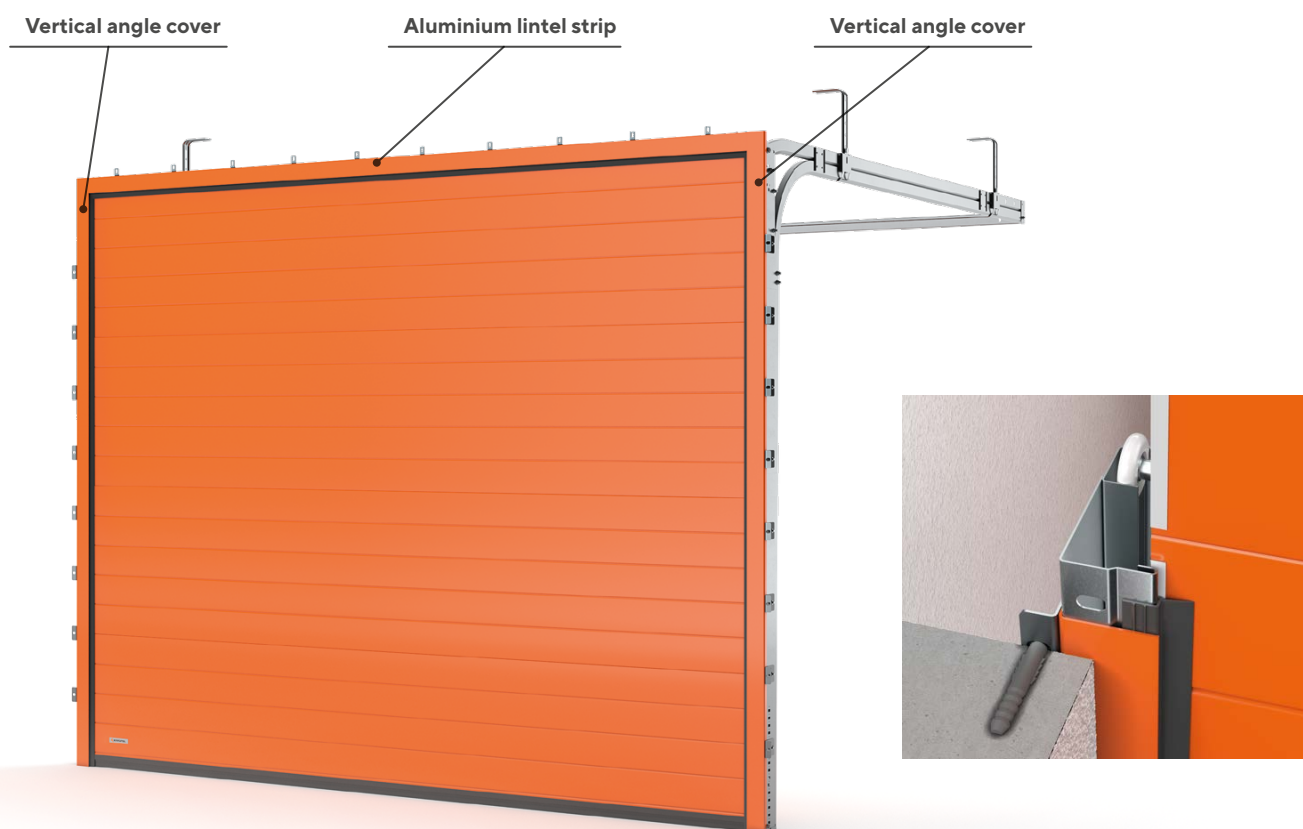

Advantages:

- › Perfect match with a facade.
- › Wide range of colours – RAL, NCS, veneering.
- › Made of aluminum.
- › Flexible solutions – the possibility of ordering individual profiles (e.g. in the absence of jambs only).

Perfect match with KRISPOL'S vertical angle covers

Enjoy your new sectional garage door even if the width of jambs are limited. The covers are designed for sectional garage doors installed as standard, i.e. behind the opening clearance. The modern, minimalist design of the covers perfectly matches any building.

Advantages:

- › Can be used in buildings where the minimum width of jambs is not met – installation with the use of the cover is possible if the minimum width of the jamb is 60 mm
- › Can be used in buildings where the minimum lintel height is not maintained – the maximum possibility of lowering by 50 mm.
- › Intuitive mounting system.
- › Easy facing with aluminum lintel strip.
- › Wide range of colours – RAL, NCS, veneering.
- › Strong construction for durability.

KRISPOL aluminium lintel strip – *a unique solution in difficult installation conditions*

Aluminium lintel strip is used when conditions in a building do not allow for the complete closure of the garage opening clearance. The strip allows you to mount a sectional garage door of a standard height in a higher opening clearance. This excellent solution allows the installed sectional garage door to fit perfectly into the already existing opening clearance.

Advantages:

- › It is possible to close the remaining clearance by up to 50mm.
- › Can be used in all types of garage tracking systems (except from H and NH).
- › Wide range of colours – RAL, NCS, veneering.
- › Made of aluminum.

We are focused on *garage*
& *industrial* doors
